

# Quick Start Guide

EdgePro

# Table of contents

- System IO introduction
- LED information
- The “Before you start” page to specify the management LAN connection and monitor connection.
- BMC default log in information.
- BIOS POST and HOT key information.
- Pages (10-13) how to set BMC static IP in BIOS menu
- Pages (14-18) OS installation related settings in BIOS menu.

# System IO – Front View

---

1 1GbE LAN Port

---

2 Management LAN Port

---

3 USB 3.0 Port

---

4 Mini DisplayPort      1 x Mini DisplayPort (DP 1.1a, miniDP-to-VGA only)

---

5 Front E1.S Drive Bays (PCIe Slot 11-16)

---

6 PCIe Slot (3-4)

---

7 AC-in Port

---

# System IO – Back View

## 1.5.4 Back View

---

1 Redundant Power Supply Units (PSUs)

---

2 4056 Hot-swappable Dual Rotor Fans

---

## Configuration 2 Front View LEDs

- |    |                          |
|----|--------------------------|
| 1  | 1GbE LAN Link LED        |
| 2  | 1GbE LAN Speed LED       |
| 3  | Management LAN Speed LED |
| 4  | Management LAN Link LED  |
| 5  | UID Button / LED         |
| 6  | Power Button / LED       |
| 7  | System Alert LED         |
| 8  | BMC Heartbeat LED        |
| 9  | Drive Locate / Fault LED |
| 10 | Drive Activity LED       |

## LED Information

System LED			
LED Type	Color	LED Status	System Status
Power LED	Yellow	On	System in S5 state (DC OFF)
	Green	On	System in S0 state (DC ON)
	–	Blinking	Wait BMC ready
System Alert LED	Red	On	Non Recoverable
		Blinking	Critical
		Off	Normal
BMC Heartbeat LED	Yellow	Blinking	BMC Normal
	Green	Off	BMC Abnormal
UID LED	Blue	On	Unit identified by ID Button
		Blinking	1. Unit identified by remote command trigger 2. Trigger by PFR function
	–	Off	Node OFF or non-identified
Management LAN Link LED	Green	On	PHY Link up
		Blinking	PHY access
	-	Off	No link
Management LAN Speed LED	Green	On	Network Speed : 1000M bps
	Amber	On	Network Speed : 100M bps
AC Power LED	Green	On	Output ON and OK
		Blinking(1Hz)	AC present / Only VSB on (PS off) or PS in Smart redundant state / Off line mode
		Blinking(2Hz)	Power supply FW updating
	Amber	On	Power supply critical event causing a shutdown; failure, OCP, OVP, Fan Fail AMBER
	-	Off	No AC power to all power supplies, AC cord unplugged or AC power lost, After delay of 100ms after input power loss/removal event (end of holdup) ; with a second power supply in parallel still with AC input power.

# Before you start

- To get the management IP address, simply connect to any of the networks in the lab that has a DHCP server. The IP is automatically assigned via the DHCP server
- To see the POST screen, connect your monitor to the mini-DP port at front IO. If your monitor does not support DP1.1a, please use a mini-DP to VGA dongle, then connect your monitor to the VGA dongle.

Reference picture of a mini-DP to VGA dongle

# Check BMC IP

(Default setting will be “DynamicBmcDhcp”)

## Pre-POST

```
Inventec

System Information
Platform Name      : EdgePro 1U AC
BIOS Version       : AGVE_5.35_v0.63   Date : "10/02/2025"   Intel RC Version : 3544.P64
Processor Information
Processor Name     : Intel(R) Xeon(R) 6520P
Stepping          : GNR HCC Hx
Number of Processors : 1   Core Count : 24   Microcode Revision : 0x010003D0
S3M Information
Series            : S3M 2.0 IBL SKU   Stepping : A0
Memory Information
Total Memory Size  : 32GB   Memory Speed : 6400MT/s   RAS Mode : Indep
CPLD Information
HPM CPLD Version  : 00.59.00002025   SCM CPLD Version : 08.08.12122024
BMC Information
BMC Version       : 0.63   IPv4 : 192.168.6.224

0x2F : Memory Initialization Start
0x31 : Memory Initialization Complete
0x4F : DXE IPL Start
0x53 : CPU Cache initialization
0x60 : DXE Core Started.
```

## POST

```
Inventec

Version 2.22.1294. Copyright (C) 2025 AMI
BIOS Date: 10/02/2025 00:00:00 Ver: AGVE_5.35_v0.63
Press <DEL> or <ESC> to enter setup.
Press <F7> to enter the Boot Menu.
Press <F12> to enter the PXE Boot.
Press <Pause> to pause the BIOS POST process.

BMC Version: 0.63   IPv4: 192.168.6.224

# How to get BMC IP

---

This document describes how to get BMC IP.

## Insturction

---

1. You can see BMC IP on screen after power on the system.
2. You can get BMC IP from the system log.
3. You can access BMC WebGUI with URL: <https://{BMCIP}>. If you never change password on BMC WebGUI, please change your password.

Default User:admin  
Default Password:admin

## LOGIN WEB GUI

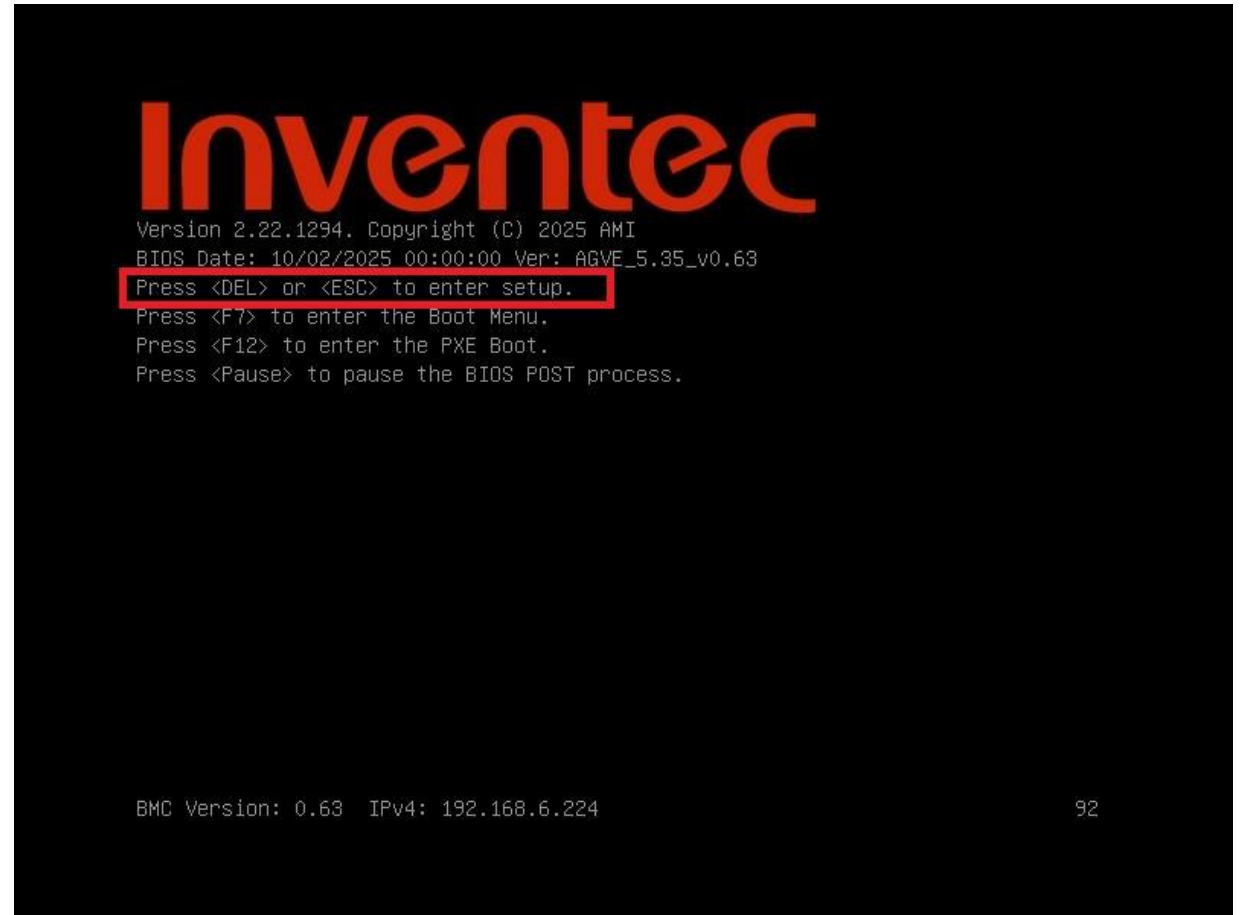

---

# Enter BIOS

Press <DEL> or <ESC>  
to Enter BIOS Setup menu

## 4.2 HOTKEY

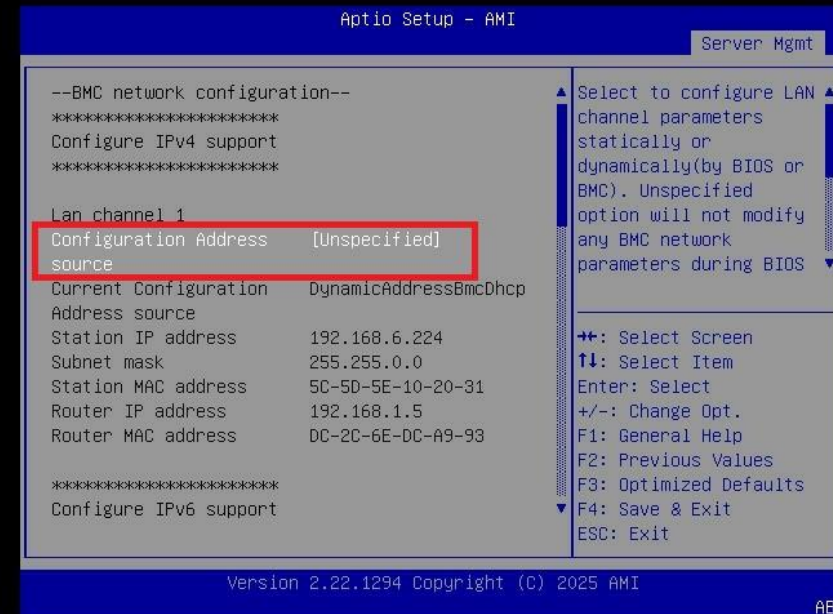

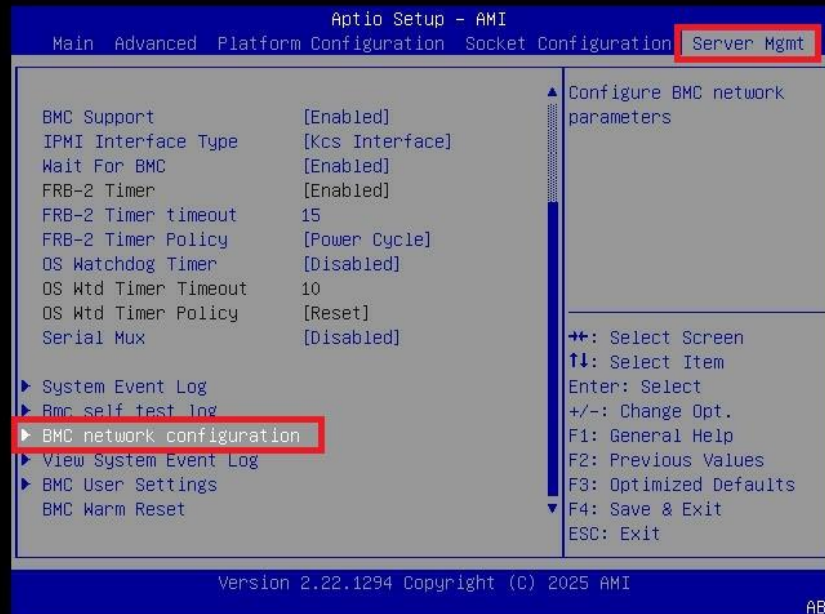

Table 29 - Hotkey during POST and on the BIOS Setup Menu

Hot Key	Description at POST	Description of BIOS Setup Menu
F1	N/A	General Help
F2	N/A	Previous Values
F3	N/A	Optimized Defaults
F4	N/A	Save & Exit
F5	N/A	N/A
F6	N/A	N/A
F7	To enter the Boot Menu.	N/A
F8	N/A	N/A
F9	N/A	N/A
F10	N/A	N/A
F11	N/A	N/A
F12	To enter PXE Boot.	N/A
Esc	To enter Setup.	Exit Page/Menu
Pause	To pause the BIOS POST process.	N/A
K	N/A	Scroll help area upwards
M	N/A	Scroll help area downwards
Delete	To enter Setup.	N/A

# Set BMC Static IP

1. BIOS menu\Server Mgmt \BMC network configuration  
\Configuration Address source

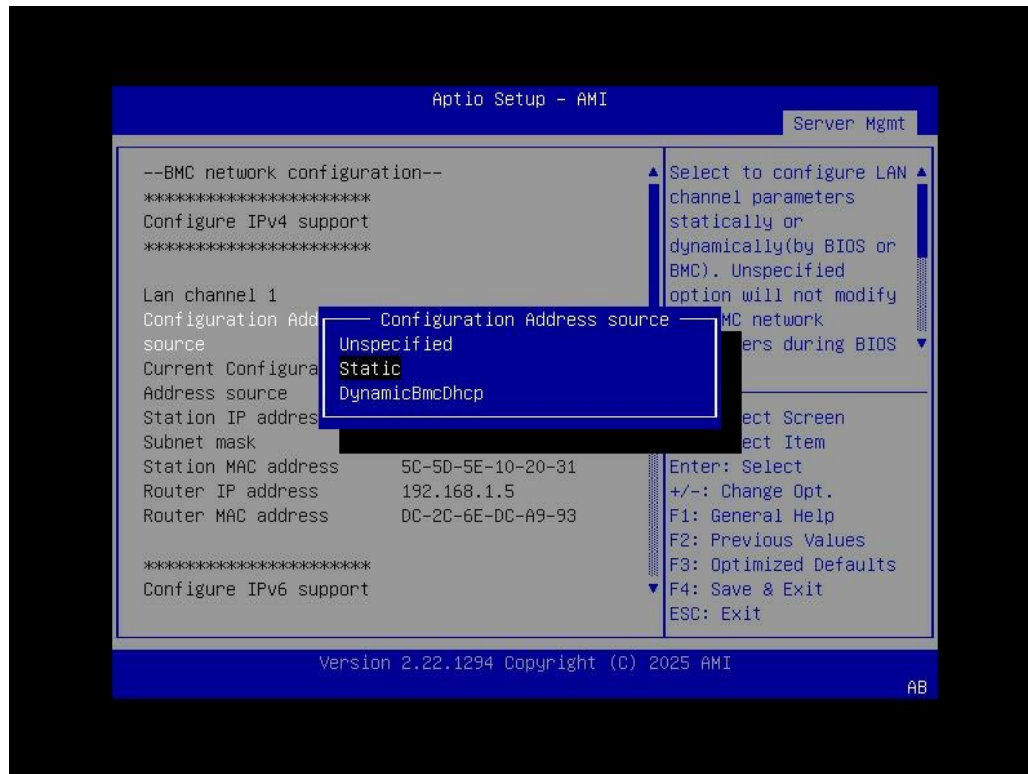

Note: Configuration Address source always show “Unspecified” no matter setting is Static or DynamicBmcDhcp

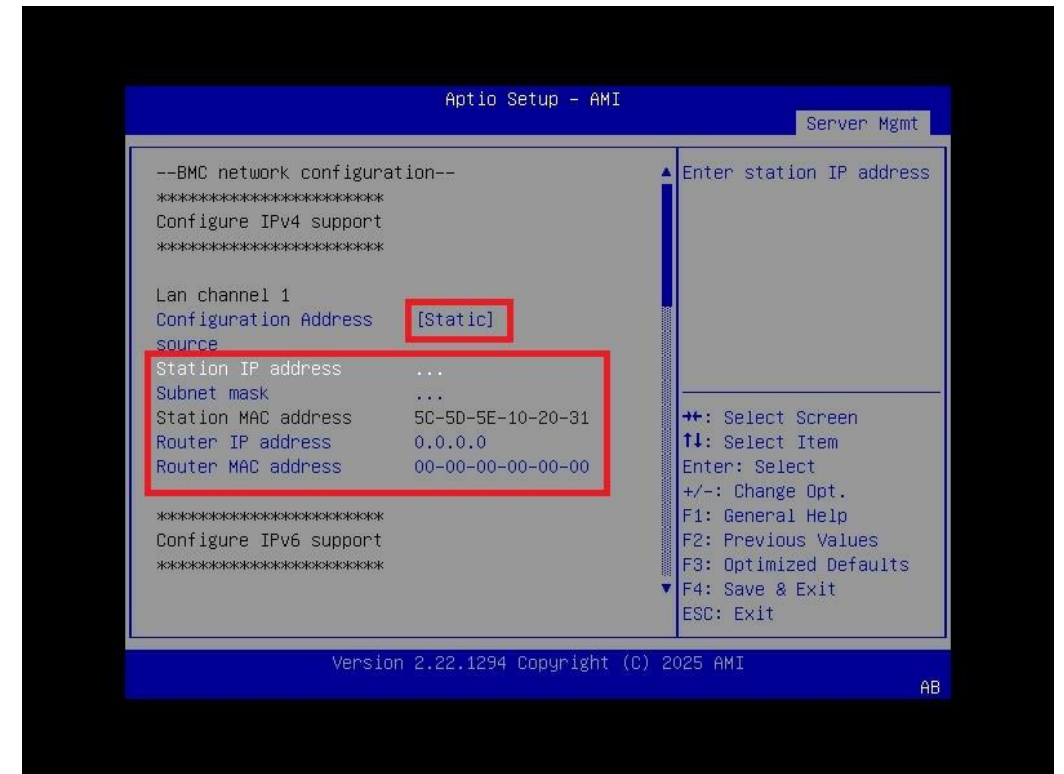

# Set BMC Static IP

## 2. Configuration Address source

=> Select "Static"

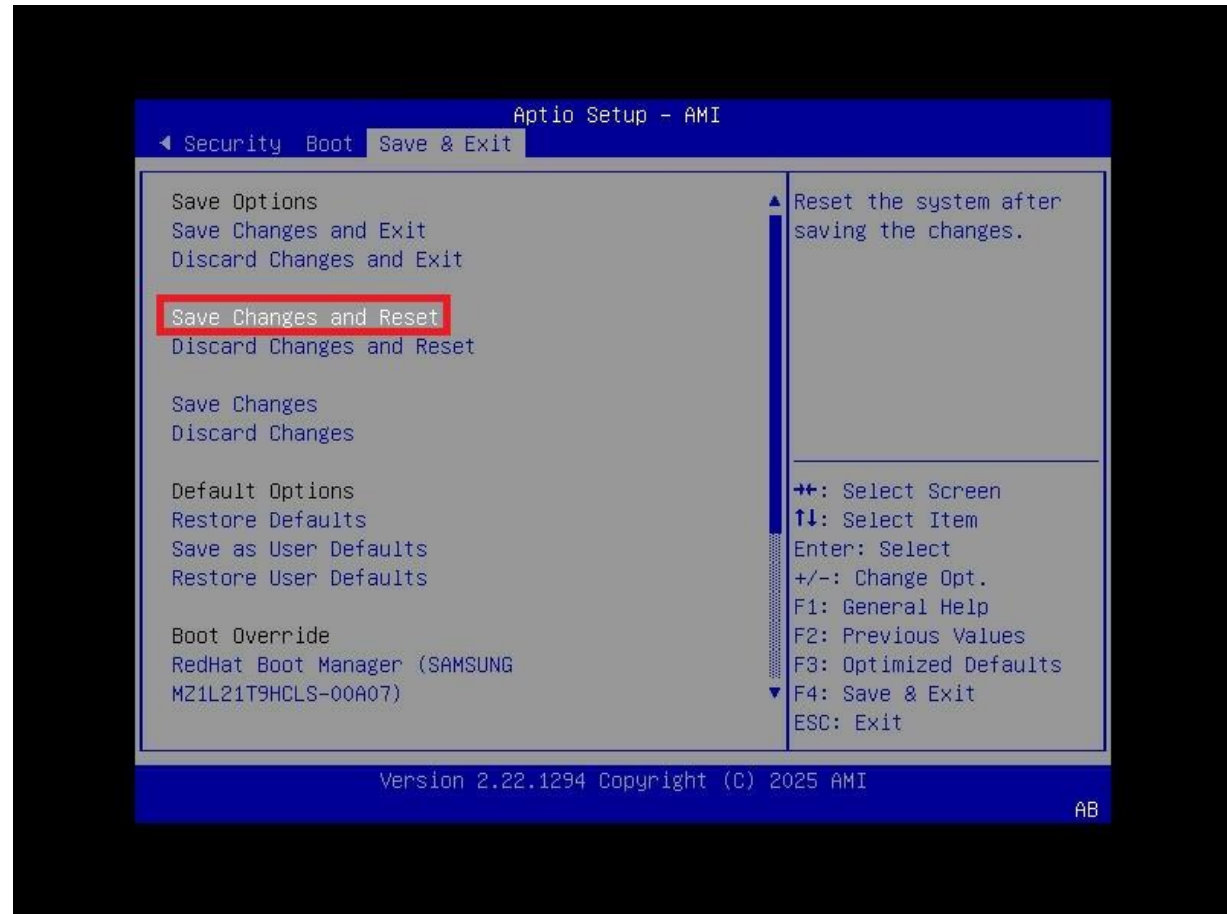

## 3. Setup Static IP

# Set BMC Static IP

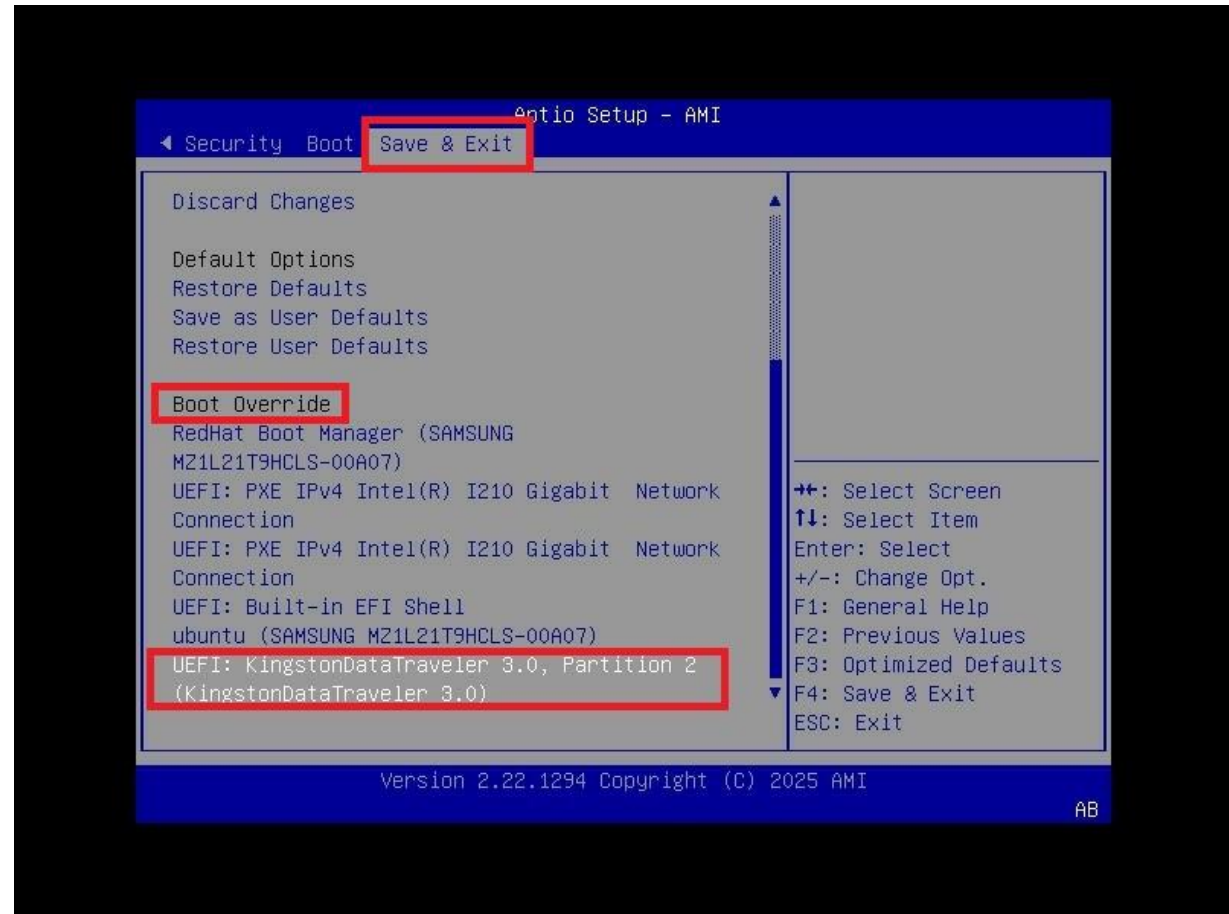

## 4. BIOS menu\Save & Exit

Select “save and reset server”

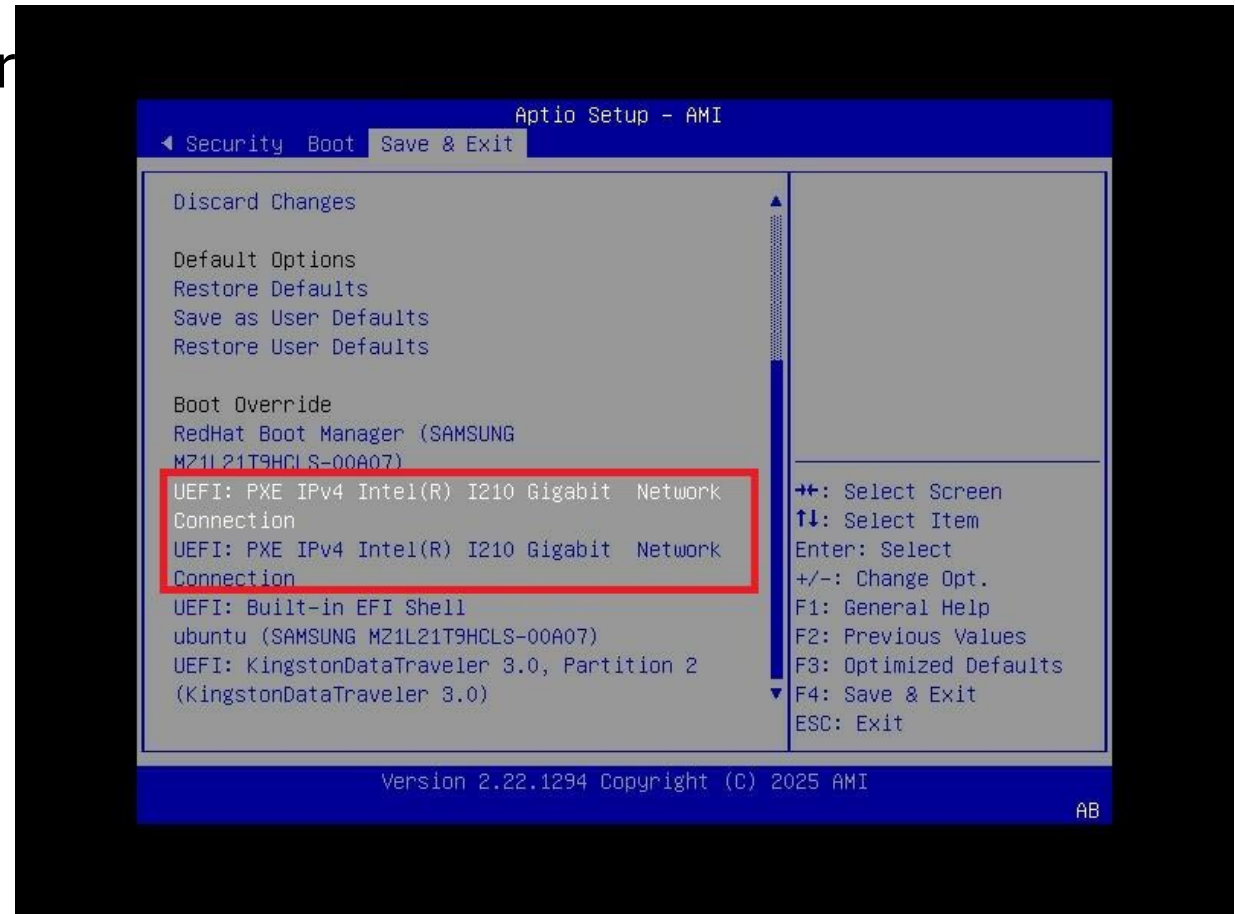

# Install OS – via USB key

1. Insert usb key to SUT
2. BIOS menu\Save & Exit  
    \Boot Override
3. Select USB device
4. Start to install OS

# Install OS – via PXE

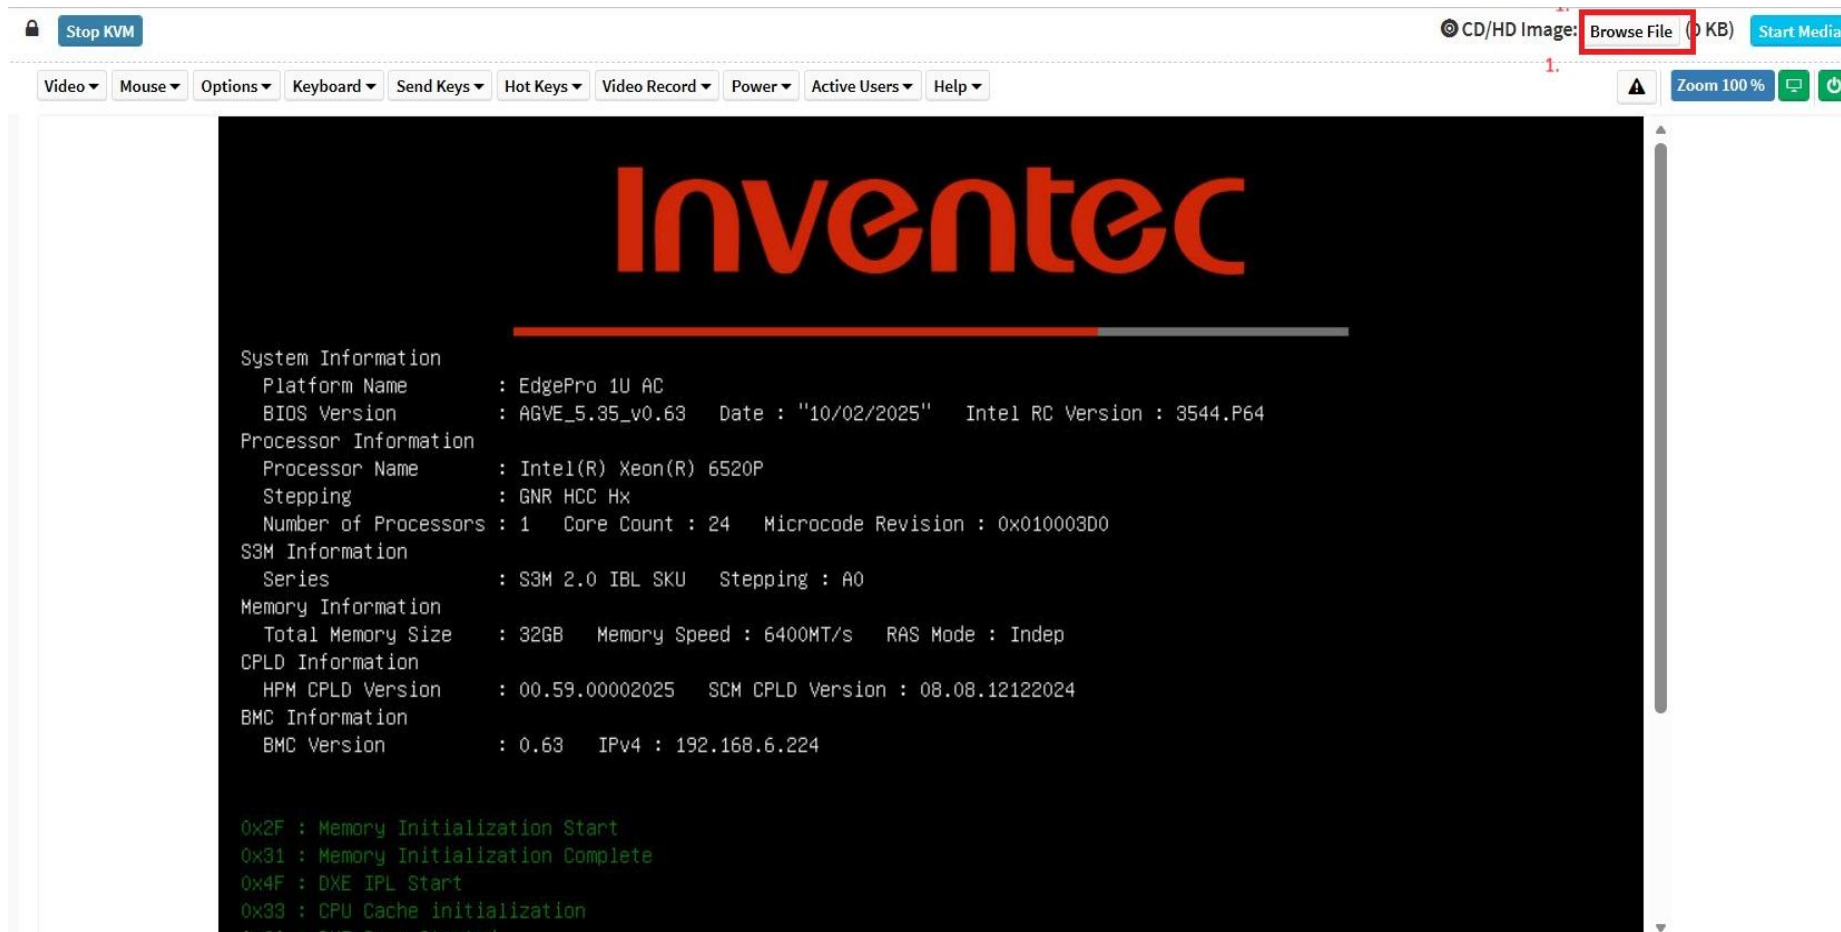

1. NIC port connect to PXE server
2. BIOS menu\Save & Exit  
    \Boot Override
3. Select Network device
4. Start to install OS

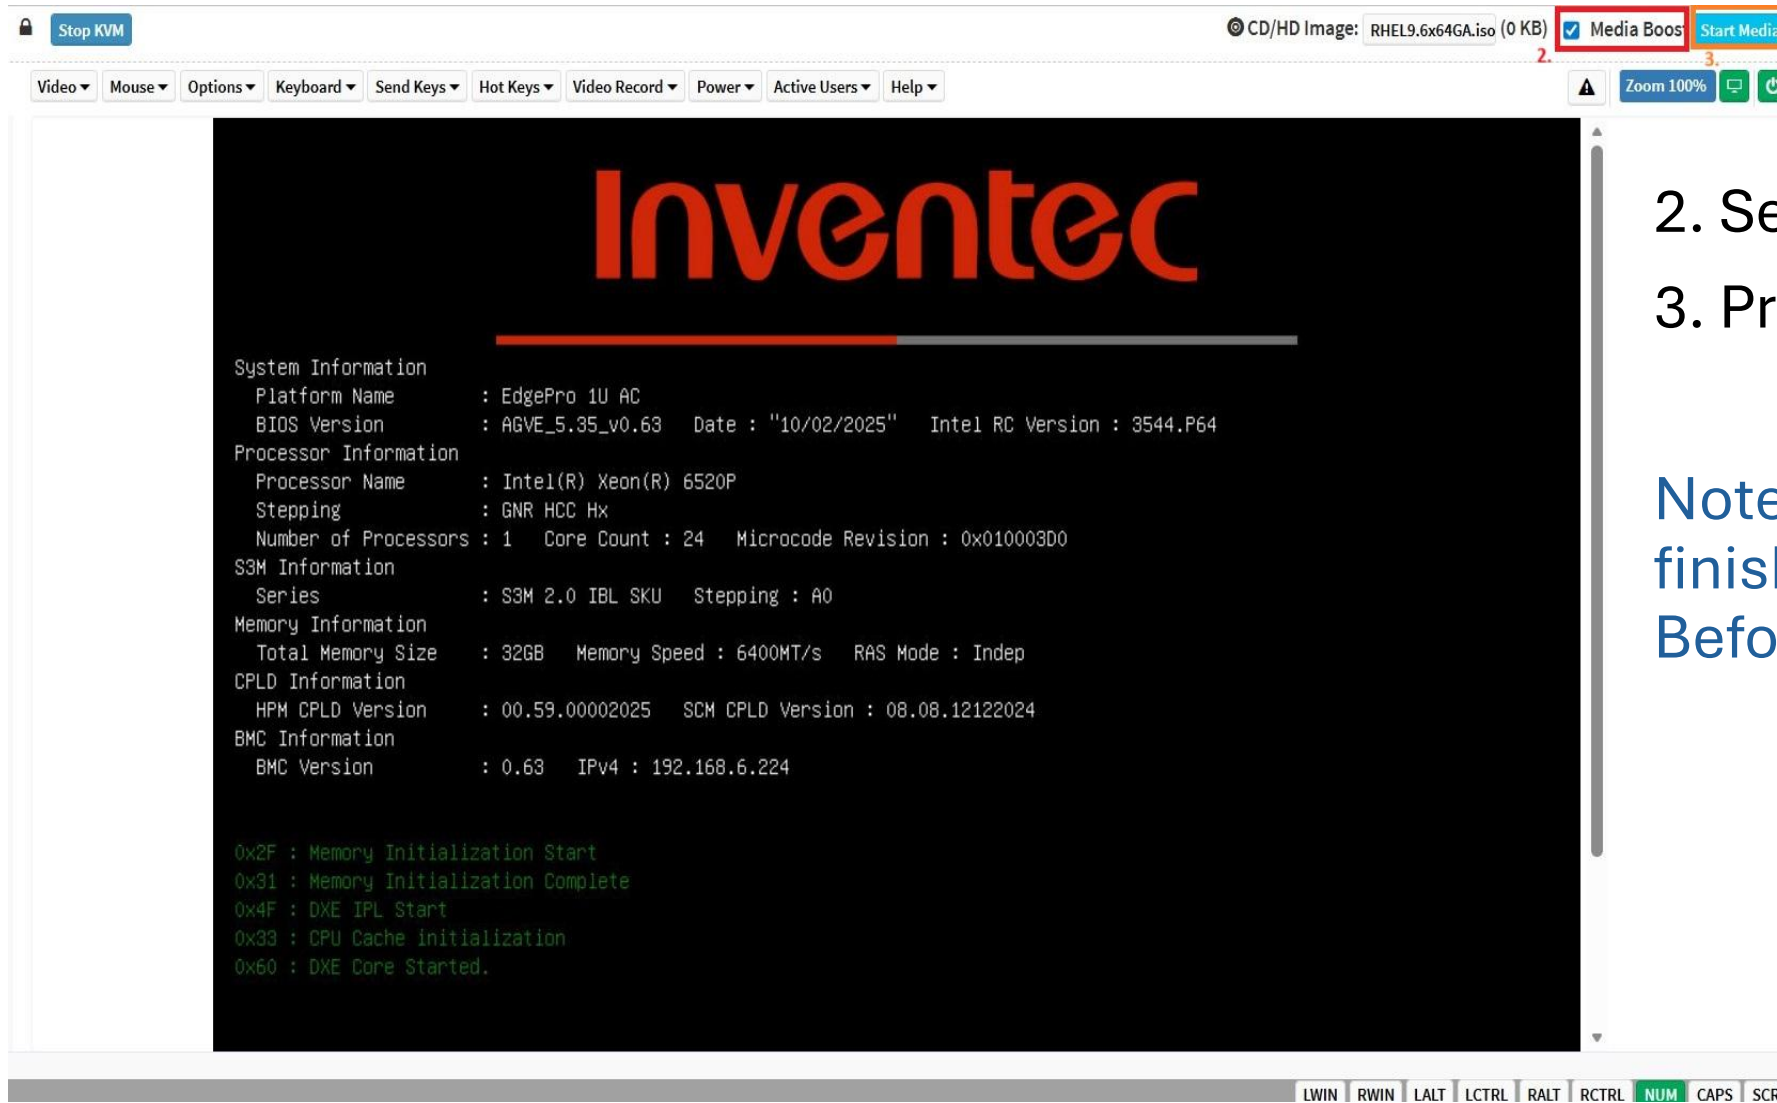

# Install OS – via Virtual Media

1. Mount ISO file: Press “Browse File” and select OS ISO file

# Install OS – via Virtual Media

2. Select Media Boost
3. Press Start Media

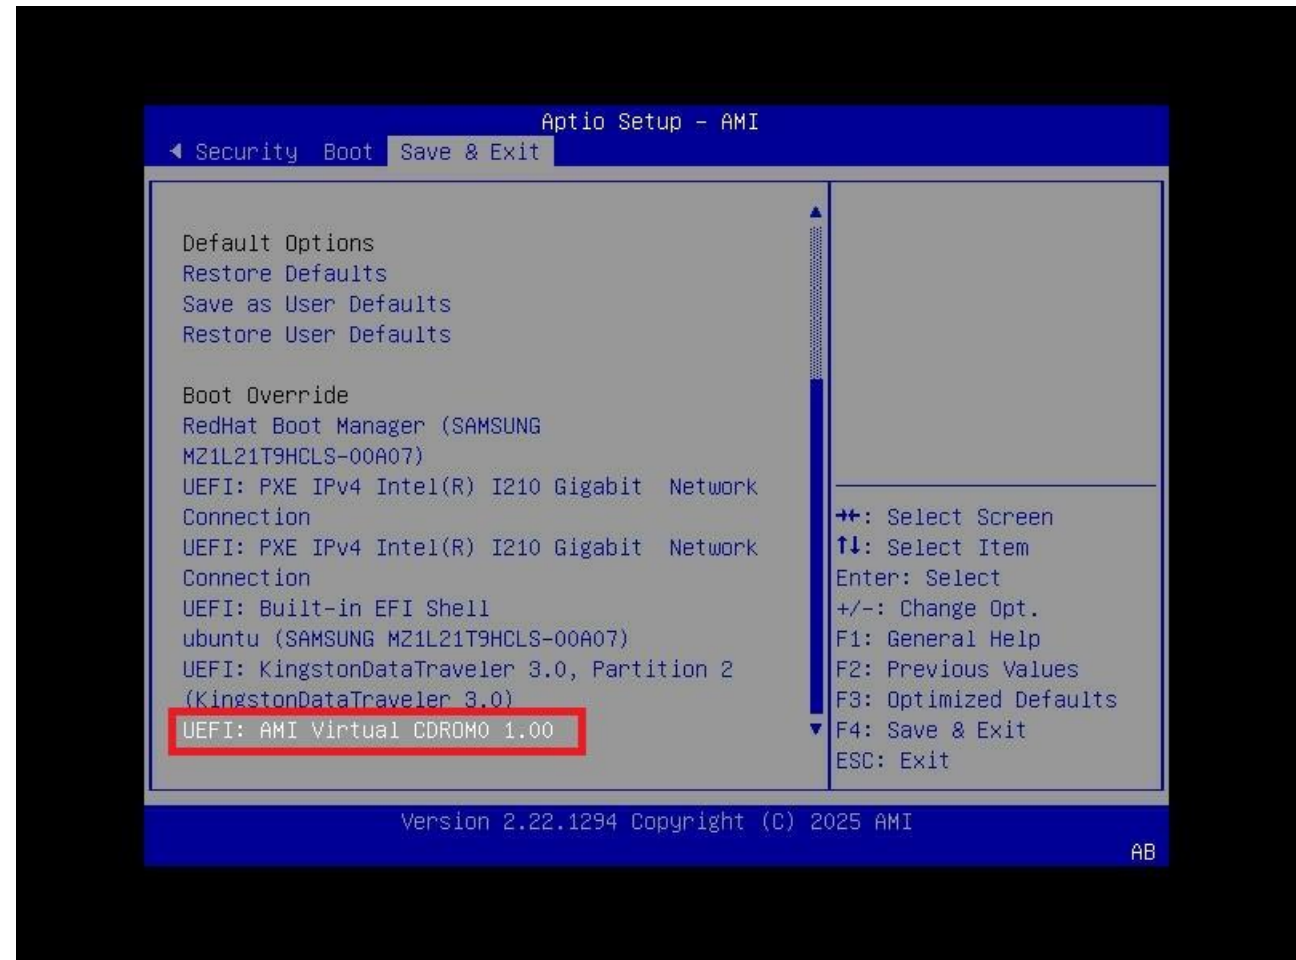

Note: Step 1~3 need to finished on pre-POST or Before reboot SUT

# Install OS – via Virtual Media

4. Enter BIOS menu\Save & Exit

\Boot Override

5. Select AMI Virtual CDROM 1.00

# Install OS – via Virtual Media

## 6. Start to install OS
